

in-class problem

course eecs 468 programming paradigms

date august 25rd 2023

name morgan bergen

1. a "hello world!" program generally is a computer program that outputs or displays the message "hello, world". it is often used to illustrate the basic syntax of a programming language
2. write a "hello world" program in html
3. for full credit include...
 - tag that tells the browser to interpret the page as modern html
 - header and body
 - tag that tells the browser that the character set is "utf-8"
 - tag that will display "hello world" on the browser tab
 - tags that will display "hello world" in the browser window

```
<!doctype html>
<html lang="en">

<head>
  <!-- tag that tells the browser that the character set is "utf-8" -->
  <meta charset="UTF-8">

  <!-- tag that will display "hello world" on the browser tab -->
  <title>Hello World</title>
</head>

<body>
  <!-- tags that will display "hello world" in the browser window -->
  <h1>Hello World!</h1>
</body>

</html>
```
